

Manage this device with Digi Remote Manager

DIGI XBEE INDUSTRIAL GATEWAY

Programmable gateway connects Digi XBee enabled devices to remote applications over cellular or Ethernet

Digi XBee® Industrial Gateway is a rugged Digi XBee to IP solution. Ideal for any environment, the gateway has an extended temperature range and rugged enclosure.

Digi XBee Industrial Gateway features scalable remote configuration and management of Digi XBee networks. By default, all **Digi XBee** data sent to the gateway is automatically available to online applications via **Digi Remote Manager®** (Digi RM). With a simple, open-source Python development environment, this gateway also enables custom applications to run locally while

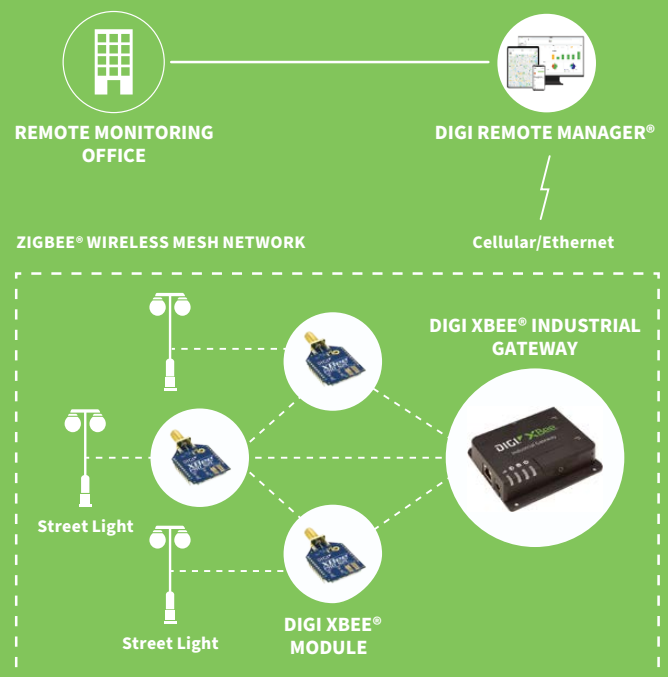

interfacing across existing Ethernet or cellular networks for WAN connectivity to cloud-based apps.

Gain critical insights into your deployed devices and manage your network with Digi RM — the command center for your deployment. Digi RM is a cloud-based solution that facilitates easy setup, mass configuration, maintenance and support for hundreds or even thousands of remote Digi devices. Digi Remote Manager lets you evaluate, update and configure your Digi enterprise products — and the health of your network — at scale after deployment.

BENEFITS

- Open-source Python environment for custom application development on the gateway
- Out-of-box integration with **Digi Remote Manager** enables remote connectivity, configuration and management of **Digi XBee** networks
- ZigBee enabled for connection to local wireless devices
- Cellular and Ethernet WAN options for flexible broadband connectivity
- Can be deployed in any environment due to industrial temp range and rugged enclosure

DIGI REMOTE MANAGER®

Digi Remote Manager is the technology platform that brings networks to the next level, allowing networks — and the people who manage them — to work smarter. With Digi Remote Manager you can transform a multitude of dispersed IoT devices into a dynamic, intelligent network. Now you can easily deploy, monitor and diagnose thousands of mission-critical devices from a single point of command — on your desktop, tablet or phone. All the while, its software-defined security diligently safeguards your entire Digi ecosystem.

CAPABILITIES

- Activate, monitor and diagnose your mission-critical devices from a single point of command and control — on your desktop or mobile app
- Schedule key operations — including firmware updates and file management — on a single device or on a group of devices, keeping your network functionality up-to-date and maintaining compliance standards
- Manage edge devices out-of-band via console terminal access
- Keep tabs on device health and connectivity across device deployments of any size
- Create detailed reports and enable real-time alerts for specified conditions
- Integrate device data through open APIs to gain deeper insights and control with third-party applications
- Report and alert on performance statistics, including connection history, signal quality, latency, data usage and packet loss

INFRASTRUCTURE

- Hosted in a commercial-grade cloud server environment that meets SOC 1®, SOC 2® and SOC 3® standards
- Superior availability, operating to 99.9% or greater
- Open APIs available to support application development

SECURITY

- More than 175 security controls in place to protect your data
- Member of the Center for Internet Security® (CIS®)
- Enables compliance with security frameworks like ISO27002, HIPAA, NIST and more
- Earned Skyhigh's CloudTrust™ Program highest rating of Enterprise-Ready
