Performance
- 7150S-24/7150SC-24:24x1/10GbE
- 7150S-52: 52x1/10GbE
- 7150S-64/7150SC-64: 48x1/10GbE and 4 x 10/40GbE
- Up to 1.28 terabits per second
- Up to 960 million packets per second
- Wire speed L2 and L3 forwarding

Ultra Low Latency
- From 350 nanosecond latency
- Same latency for L2 and L3
- Low latency at 1,10 and 40GbE
- Low jitter for unicast and multicast
- Dynamic buffer allocation

Advanced Provisioning & Monitoring
- CloudVision
- LANZ Microburst Analysis
- IEEE 1588 PTP high precision clock option
- Ultra Low Latency NAT, MNAT
- DANZ Advanced Mirroring & TAP Aggregation for improved visibility
- sFlow (RFC3176)
- Zero Touch Provisioning (ZTP)
- VMTracer
- Self-configure/recover from USB

Data Center Optimized Design
- Typical power draw from 3.5W/port
- 1+1 redundant & hot-swappable power
- N+1 redundant & hot-swappable fans
- Front-to-rear or rear-to-front fans

Resilient Control Plane
- Multi-core x86 CPU
- 4 GB DRAM
- 2 (S) or 4GB (SC) Flash
- User applications can run in a VM
- SC models are ROHS compliant

Built-in Solid State Storage
- Solid State Drive options (*D models)
- Store logs and data captures
- Leverage linux tools with no limitations

Arista Extensible Operating System
- Single binary image
- Fine-grained truly modular network OS
- Stateful Fault Containment (SFC)
- Stateful Fault Repair (SFR)
- Full access to Linux shell and tools
- Extensible platform - bash, python, C++

Overview

The Arista 7150 Series is an ultra low latency 1RU 1/10/40GbE layer 2/3/4 wire speed switch family, offering a unique combination of performance, advanced functionality and extensive onboard resources. The 7150 Series includes the 7150S and the 7150SC models. The 7150SC variants are equipped with a higher performance control plane and meet newer ROHS requirements.***

Designed to suit the requirements of demanding environments such as ultra low latency financial ECNs, HPC clusters and cloud data centers, the class-leading deterministic latency from 350ns is coupled with a set of advanced tools for monitoring and controlling mission critical environments.

Arista 7150 Series

| Feature	Benefits
Wire-speed Low Latency Network Address Translation	Reduce NAT latency by 10s of microseconds vs traditional high latency solutions
IEEE 1588 Precision Time Protocol (Boundary and Transparent modes)	Provides hardware-based timing for accurate in-band time distribution with nanosecond accuracy
Integrated High Precision Oscillator	Ensures highly accurate timing with extended holdover
Latency and Application Analysis LANZ	Detect, capture, stream microbursts and transient congestion at microsecond rates
Advanced Multi-port Mirroring Suite	Avoid costly SPAN/TAP aggregators with in-switch capturing, filtering and time-stamping
Wire-speed VXLAN Gateway	Enabling next generation Data Center virtualization
AgilePorts	Adapt from 10G to 40G without costly upgrades

Arista EOS

The Arista 7150 Series run the same Arista EOS software as all Arista products, simplifying network administration. Arista EOS is a modular switch operating system with a unique state sharing architecture that cleanly separates switch state from protocol processing and application logic. Built on top of a standard Linux kernel, all EOS processes run in their own protected memory space and exchange state through an in-memory database. This multi-process state sharing architecture provides the foundation for in-service-software updates and self-healing resiliency.
With Arista EOS, advanced monitoring and automation capabilities such as Zero Touch Provisioning, VMTracer and Linux based tools can be run natively on the switch with the powerful multi-core x86 CPU subsystem.

*** Material changes were made to the new 7150SC models to ensure RoHS compliance as per Commission Delegated Directive (EU) 2019/172 - of 16 November 2018. As of February 2020 the 7150S models will no longer be available for sale in RoHS countries. Customers in RoHS countries should transition to the 7150SC models on or before February 2020.

Deterministic, Ultra Low Latency

The Arista 7150 Series is optimized for ultra low latency, cut-through forwarding. It offers the same low latency characteristics at all packet sizes. The latency remains consistent even when features such as L3, ACL, QoS, Multicast, Port Mirroring, LANZ+ and Time-Stamping are enabled. The 7150 Series also supports cut-through mode at 100Mb and 1GbE speeds at low latency for legacy connections.
Arista 7150 Series 10G latency profile

Dynamic Buffer Allocation

The Arista 7150 Series forwards packets at an ultra low latency of 350 nanoseconds from any port to any other port. However when a microburst or transient in-cast condition causes contention of an egress interface, packets must be buffered. The 7150s' global packet memory is dynamically allocated on demand to congested interfaces, avoiding packet loss.

Enhanced Features for High Performance Networks

The Arista 7150 Series delivers a suite of advanced traffic control and monitoring features to improve the agility of modern high performance environments, with solutions for network address translation, precise timing and next-generation virtualization.

Low-Latency Address Translation

The Arista 7150 Series includes support for line rate NAT while still delivering latency of under 1 microsecond. Latency and performance sensitive environments can take advantage of NAT to resolve addressing challenges such as masking internal addresses and translating overlapping ranges to avoid conflicts without penalty.

Monitoring, Analysis and Forensics

Arista's enhanced LANZ microburst and latency analysis enables the monitor of even the slightest transient congestion at microsecond granularity. Data affected by congestion is captured and verbose logs are written locally and streamed in real time to external tools over an open protocol buffer encoded format. Event Monitoring complements LANZ with protocol-layer captures, providing a forensic history of network adds, moves and changes. The combination of Arista's Advanced Mirroring Suite and the ability to time-stamp every packet in hardware with features such as sFlow, delivers unmatched instrumentation of network behavior and performance. Optimized to support pro-active capacity planning and pre-empt issues, the 7150 Series is uniquely equipped to root-cause network anomalies.

Precision Timing (IEEE 1588)

Arista's hardware derived Precision Time Protocol solution provides a robust mechanism for accurate in-band time distribution in high performance environments. Offering both Boundary and Transparent Clock modes, the versatile 7150 Series enables timing networks to scale independently of Grand Master capacity, maintaining accuracy approaching that of a dedicated out-of-band platform. The 7150 Series employs a high precision OCXO for consistent timekeeping. This clock module ensures exceptional determinism in timing operations.

Virtualization

Supporting next-generation virtualized data centers requires tight integration with orchestration tools and emerging encapsulation technologies such as VXLAN and NVGRE. The 7150 Series builds on the valuable tools already provided by the Arista VMTracer suite to integrate directly into encapsulated environments. Offering a true, wire-speed, low latency gateway between VXLAN and traditional L2/3 environments, the 7150 Series makes integration of non-VXLAN aware devices including servers, firewalls and load-balancers, seamless and provides the ability to leverage VXLAN as a standards based L2 extension technology for non-MPLS environments.

AgilePorts Enable Flexible Deployment

AgilePorts deliver complete flexibility in connectivity - each SFP+ interface is capable of supporting 100M-10G over a variety of media, including DWDM with distances up to 80km. The AgilePorts feature also enables groups of adjacent SFP+ ports to be configured for 40Gb operation using 10Gb transceivers and cables providing maximum port flexibility and a seamless migration from 10Gb to 40Gb.

Native 40GbE interfaces

Arista 7150 Series AgilePorts - Four SFP+ grouped to deliver 40GbE

High Availability

The Arista 7150 Series was designed for high availability and simple provisioning from both a software and hardware perspective. Key high availability features include:
• 1+1 hot-swap power supplies and four N+1 hot-swap fans
• Color coded PSUs and fans - common to Arista 1RU devices
• EOS Zero Touch Provisioning (ZTP)
• Self healing software with Stateful Fault Repair (SFR)
• Live software patching
• 32-way MLAG and ECMP routing for all-active L2 and L3

Feature Overview

Layer 2 Features

• 64K L2 Forwarding Entries
• 802.1w Rapid Spanning Tree
• 802.1s Multiple Spanning Tree Protocol
• Rapid Per VLAN Spanning Tree (RPVST+)
• 4096 VLANs
• Q-in-Q
• 802.3ad Link Aggregation/LACP
    • 16 ports/channel
    • 64 groups per system
• Multi-Chassis Link Aggregation (MLAG)
    • Uses IEEE 802.3ad LACP
    • 32 ports per MLAG
• Custom LAG Hashing
• 802.1AB Link Layer Discovery Protocol
• 802.3x Flow Control
• Jumbo Frames (9216 Bytes)
• IGMP v1/v2/v3 snooping
• Storm Control
• RAIL
• Audio Video Bridging (AVB)

Layer 3 Features

• 70K IPv4 Routes
• 20K IPv4 Multicast Routes
• 18K IPv6 Routes*
• 64K Next Hops
• VRF
• RIPv2
• OSPF
• OSPFv3
• BGP
• MP-BGP
• ISIS
• 32-way Equal Cost Multi-path Routing (ECMP)
• BFD
• IGMP v2/v3
• PIM-SM / PIM-SSM
• Anycast RP (RFC 4610)
• MSDP
• Selective Route Download
• VRRP
• Virtual ARP (VARP)
• Network Address Translation
    • Source/Destination NAT
    • Source/Group Multicast NAT

Security Features

- Ingress/Egress ACLs using L2, L3, L4 fields
- ACL Logging and Counters
- Control Plane Protection (CoPP)
- PDP
- Service ACLs
- DHCP Relay / Snooping
- TACACS+
- RADIUS

Virtualization Support

- VXLAN Routing and Bridging
- VMTracer VMware Integration
    - VMware vSphere support
    - VM Auto Discovery
    - VM Adaptive Segmentation
    - VM Host View

Advanced Monitoring and Provisioning

- Zero Touch Provisioning (ZTP)
- Enhanced Latency Analyzer and Microburst Detection (LANZ)
    - Configurable Congestion Notification (CLI, Syslog)
    - Streaming Events (GPB Encoded)
    - Capture/Mirror of congested traffic
    - Continuous Latency Monitoring
- Advanced Monitoring and TAP Aggregation (DANZ)
    - Port Mirroring M:N (4 sessions)
    - SPAN/TAP M:N Aggregation
    - L2/3/4 Filtering
    - Custom header matching and filtering*
    - Traffic Steering*
    - Custom load balancing
    - Time-stamping
    - Ingress and Egress Truncation
    - Mirror to EOS/SSD
- Advanced Event Management suite (AEM)
    - CLI Scheduler
    - Event Manager
    - Event Monitor
    - Linux tools
- Integrated packet capture/analysis with TCPDump
- SSD for logging and data capture (*D models)
- RFC 3176 sFlow
- Restore & Configure from USB
- Blue Beacon LED for system identification
- Software Defined Networking (SDN)
    - Openflow 1.0*
    - Arista DirectFlow*
    - eAPI

Quality of Service (QoS) Features

- Up to 8 queues per port
- Strict priority queueing
- 802.1p based classification
- Per-Priority Flow Control (PFC)
- Data Center Bridging Extensions (DCBX)
- DSCP based classification and remarking
- Egress Rate Shaping/WRR
- Policers
- Rate limiting

Precision Timing

- Precision Time Stamping
- Precision Time Protocol - Transparent Clock
- Precision Time Protocol - Boundary Clock
- High Precision Oscillator (optional on 24S, standard on all other models)

Network Management

- CloudVision
- 100/1000 Management Port
- RS-232 Serial Console Port
- USB Port
- SNMP v2, v3
- Management over IPv6
- Telnet and SSHv2
- Syslog
- Role based Access Control
- AAA
- Industry Standard CLI
- Blue Beacon LED for system identification

Extensibility

- eAPI
- Linux Tools
    - Bash shell access and scripting
    - RPM support
    - Custom kernel modules
- Programmatic access to system state
    - Python
    - C++
- Native KVM/QEMU

* Not yet supported in EOS
