## STM-1/OC-3 Add-Drop Multiplexer

- STM-1/OC-3 PDH/Ethernet add/drop multiplexer for grooming LAN and legacy (TDM) traffic over SDH/SONET networks
- Ethernet traffic mapped to 1 VC-3/VC-4/STS-1, up to 3 VC-3/STS-1, up to 63 VC-12 or 84 VT-1.5
- 1+1 MSP/APS redundancy
- PDH interface for 8 or 21 E1 (G.703), 8 or 28 T1 (G.703), 1 E3/T3, or 1 E3/T3 with 21/28 E1/T1 ports
- 10/100BaseT interface with VLAN support and point-to-multipoint switching capability

FCD-155E is an STM-1/OC-3 add/drop multiplexer that transports LAN and traditional (TDM) traffic over SDH/SONET networks. When bandwidth granularity of the Ethernet channel is configured to 2 Mbps (VC-12) or 1.5 Mbps (VT-1.5), FCD-155E utilizes the SDH/SONET infrastructure for cost-effective connectivity.

Optional PDH interface modules include:

- 8- or 21-port E1
- 8- or 28-port T1
- Single-port E3/T3
- Single-port E3 with 21-port E1

Single-port T3 with 21-port E1 or 28-port T1

Optional Ethernet interface configurations include:

- 2-port bridging 10/100BaseT
- 6-port 10/100BaseT (two bridging and four transparent ports).

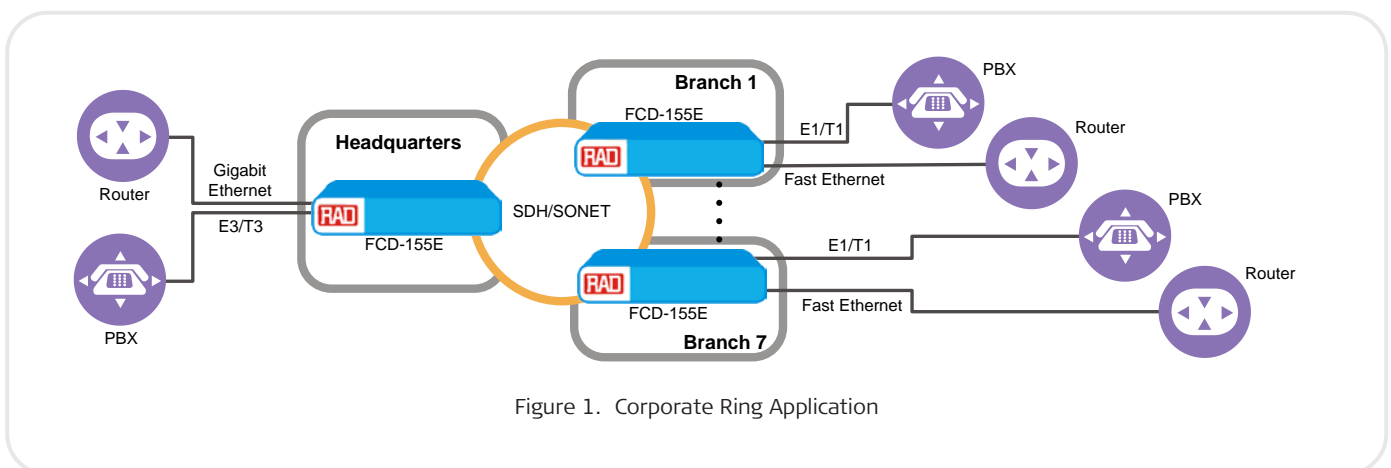

Figure 1. Corporate Ring Application

### NETWORK INTERFACE

The STM-1/OC-3 interfaces are user-configurable and provide a high-quality and high-availability link, as well as performance monitoring of the traffic path.

The STM-1/OC-3 link is supplied with an SFP socket (see *Ordering*). It is strongly recommended to order this device with **original RAD SFPs installed**. This will ensure that prior to shipping, RAD has performed comprehensive functional quality tests on the entire assembled unit, including the SFP devices. RAD cannot guarantee full compliance to product specifications for units using non-RAD SFPs.

The user can define the following SDH/SONET clock sources:

- Internal
- Recovered from the STM-1/OC-3 interface, including automatic selection based on SSM (Synchronization Status Messaging)
- External E1
- Station clock.

FCD-155E features an optional ADM configuration mechanism with SNCP path protection.

Optional 1+1 link protection mechanism (unidirectional MSP/APS) and SNCP path protection are also available.

Maintenance capabilities include user-activated local loopbacks and remote loopbacks on the STM-1/OC-3 main link and PDH tributaries.

### ETHERNET INTERFACE

The 2-port 10/100BaseT interface includes a built-in Ethernet bridge that supports VLAN according to IEEE 802.1Q and 802.1p.

The 4-port transparent LAN extension, without bridge functionality, creates total separation between customers, for security. The maximum frame length is 2 kB.

The 10/100BaseT LAN interface features autonegotiation for plug-and-play Ethernet connectivity and complies to IEEE 802.3/Ethernet V.2 standards. The interface also features VLAN stacking.

Ethernet traffic is mapped into SDH/SONET containers using VCAT and encapsulated with:

- Generic Framing Procedure (ITU-T G.7041, ANSI T1-105.02), framed mode
- Link Access Procedure for SDH/SONET (LAPS) protocols following draft recommendation ITU-T X.85/X.86.

Each user's Ethernet traffic can be mapped into SDH/SONET virtual containers in any of the following ways:

- Up to 63 × VC-12, or 84 × VT-1.5
- 3 × VC-3/STS-1
- 1 × VC-4.

Ethernet traffic can be switched to different bundles of virtually concatenated VCs (up to 8 bundles) according to a predefined group.

Link Capacity Adjustment Scheme (LCAS) is supported in compliance with the G.7042 standard, which allocates bandwidth according to Ethernet traffic.

SDH/SONET media can transport basic Ethernet packets of up to 1536 bytes enabling connection to MPLS networks.

The Spanning Tree Protocol (STP) and Rapid Spanning Tree Protocol (RSTP) support Layer 2 ring applications.

## TDM INTERFACES

FCD-155E has an optional interface module consisting of 8 or 21 balanced E1 or 8 or 28 T1 ports that transfer transparent data in compliance with G.703. The unbalanced E1 interface is software-selectable.

An optional E3/T3 interface module transports unframed E3/T3 data over SDH/SONET.

Another optional interface module combines E3 or T3 with 21 E1 ports, or T3 with 28 T1 ports.

TDM traffic is mapped into SDH/SONET VC-12/VC-11/VC-3 or SONET VT1.5/STS-1 containers that can be placed anywhere within the STM-1/OC-3 bandwidth.

## MANAGEMENT AND SECURITY

Remote units can be managed in the following ways:

- Via DCC based on IP/PPP protocols
- Via a dedicated virtual group containing at least one VC-12/VT-1.5 channel
- Inside the user traffic in a virtual group, separated from the user traffic by the GFP Channel ID or VLAN tag
- Out-of-band, via direct connection to one of the LAN ports.

Status and diagnostic information is defined, configured, and monitored using one of the following methods:

- ASCII terminal connected to the V.24/RS-232 control port
- Telnet host via management platform or LAN port
- Network management station running RADview, the RAD SNMP network management application

- TFTP applications to update software and upload/download remote configurations
- Web Based element manager.

## MONITORING AND DIAGNOSTICS

FCD-155E has comprehensive diagnostic capabilities, including:

- Ethernet and SDH/SONET link monitoring
- Real-time alarms to alert the user of fault conditions. Alarms are reported to the management station and simultaneously relayed through a dry contact port.

## ARCHITECTURE

AC or DC power supplies are provided with an alarm-activated fan for forced-air cooling. They are available in redundant and mixed AC/DC power supply configurations.

FCD-155E is a compact 1U high 19-inch unit that can be mounted in a 19-inch rack with the optional rack-mount kit (see *Ordering*).
